FLYING COLORS

The Swiss manufacture Louis Moinet, named after the famed horologist and inventor of the chronograph, evokes a spirit of innovation inspired by the legendary watchmaker. One of their greatest movement advances to date came with the limited-edition 10-Second Tempograph in 2010, which featured the first ever 10-second retrograde mechanism. This complication causes the second hand to sweep in 10-second intervals, returning to its starting position at the end of each cycle. The manufacture expanded on this technology last year with the release of the 20-Second Tempograph, and now, they have released this incredible timepiece in a new version titled the “Deep Blue,” named for its blue-colored accents and strap.

Unveiled at Dubai Watch Week, the new model is a limited edition of just 60 pieces, and features select components, including the hour dial, the retrograde mechanism, and the oscillating weight on the back, rendered in a rich shade of blue.
